

INTERVIEW THESIS BRIEF

Make AI transformation survive contact with the work.

Actual work: Own signed engagements end to end - client relationship, operating diagnosis, execution plan, hands-on AI workflow building, change adoption, measurable outcomes, and structured context return.

Company Moment

AI-native operating system	ValonOS unifies system of record, workflow, task, and agent context.
Regulated-industry expansion	Mortgage servicing is the proving ground; broader finance is the opportunity.
Founding engagements signed	The team must ship outcomes while defining its own method and quality bar.

Operating Tensions

Speed vs auditability	Bind authority, evidence, recovery, and owner before scale.
Client specificity vs platform leverage	Return context, controls, evaluation, and reusable patterns to ValonOS.
Executive mandate vs operator trust	Model real work and treat resistance as diagnostic evidence.
Autonomy vs repeatability	Capture decisions so the fifth engagement starts smarter.

Build the workflow. Return the primitive.

Resolve one client outcome onsite and leave ValonOS with reusable workflow logic, authority boundaries, evaluation, recovery, and change-learning.

Proof Map

End-to-end ambiguity	Vape-Jet transformation; Amazon launch; Cardinal remote operation.
Hands-on AI workflows	DudeWorth agentic patterns; Python, JavaScript, TensorFlow, RAG, human review.
Regulated judgment	ZeusVu safety record; Compunetics quality systems and high-consequence work.
Executive + operator credibility	Cross-functional leadership across technical, customer, production, quality, and civic settings.

90-Day Outcome

One signed engagement moved from vague mandate to working AI workflow, operator proof, measurable outcome, and a reusable ValonOS primitive - with the first engagement playbook and future strategist quality bar documented.

Executive Questions

- What must the first engagement teach ValonOS beyond the client result?
- Which decisions can the embedded strategist make alone?
- What evidence is mandatory before an agent influences a regulated decision?
- By engagement five, what should be materially faster?
